Jagiellonian University – structural funds

Structural funds

Since 2004 the JU has taken advantage of structural funds, which help finance investment, research and educational projects. The policy was favourably reflected in the 2009 ranking of Polish universities (prepared by the "Rzeczpospolita" daily and the "Perspektywy" monthly), which emphasizes the fact that the JU has been dynamically developing thanks to EU grants and subsidies.

Currently, the JU projects financed by EU structural funds are worth 1157 mln.

The following chart shows the rate of their acquisition.

"Structural funds for the JU" - [see more](#) on the Centre for Innovations, Technology Transfer and University Development Web pages (CITTRU). CITTRU offers information on the EU funds application procedures and assistance in their acquisition. Also it has run workshops on the preparation of application forms...

Malopolska Centre of Biotechnology

Małopolska Centre of Biotechnology is a joint project of the Jagiellonian and Agricultural Universities featuring the establishment of a shared facility, a centralized scientific research park, enabling complex research on different levels of organism function, increasing the competitiveness of Polish biotechnological thought and strengthening cooperation between the scientific research sphere and industry.

The main objective of the Centre will be developing research projects and developmental research work in the field of biotechnology, with a direct and applied use in industry.

Molecular Biotechnology for Health

"Molecular Biotechnology for Health" is a project localised at the Faculty of Biochemistry, Biophysics and Biotechnology, Jagiellonian University. The project scope encompasses formation of several, new research laboratories, focused on development/evaluation of new medicinal products, diagnostic techniques and a broad range of other biomedical applications.
